

IOSCO CONSERVATION DISTRICT

Reforestation Tree Sale Fundraiser

DESCRIPTION & PRICE LIST

April 23, 24 & 25, 2021

Friday, Saturday 9 a.m. to 5 p.m.

Sunday, 11 a.m. to 3 p.m.

**Seedlings/Transplants/Shrubs
Small Fruit Plants/Fruit Trees**

10% Discount for orders placed by 12/31/2020

5% Discount for orders placed by 2/12/2021

*****A limited supply of excess trees will be available on site on the days of the sale.*****

Pick up orders at Tawas Inn

1124 S. US 23, Tawas City

CONIFERS

(#2) Cedar, Northern White (*Thuja occidentalis*) (*Arborvitae*)

Height: 30'-50' Full sun to shade; moist to wet fertile soils

Grows best in soils with a PH of 7.0 or higher. Very slow growing. Used as food by deer and elk. Wood is rot resistant.

(#3) Cedar, Red (*Juniperus virginiana*)

Height: 40'-50' Full sun; moist, well drained soil

The species has dark green, scale-like needles, then reddish tinge in winter. Attractive reddish bark is visible in mature specimens. Very aromatic wood.

(#4) Pine, Austrian (*Pinus nigra*) **salt resistant**

Height: 40' -90' Full sun, partial shade; variety of soils

This very hardy tree features dark green needles and oval light brown cones. Grows in many different types of soils, like clay and sand.

(#5) Pine, Eastern White (*Pinus strobus*)

Height: 70'-100' Partial shade; wide range of soils

Michigan's state tree. Best if planted under/near taller trees. Fast-growing tree. Used for timber, and wildlife habitat.

(#6) Pine, Red (*Pinus resinosa*)

Height: 65'-100' Full sun; sandy to gravelly soils

Fast growing pine on sandy soils. Valuable for timber, reforestation, windbreak and wildlife cover. Sheds lower branches as it matures. Long lived.

(#7) Spruce, Black (*Picea mariana*)

Height: 40'-50' Full sun to shade; fine clay, loam and sandy soils

Medium size tree has dense foliage with very short, blue-green needles. It does particularly well in low or wetter areas. Does best in full sun, but is shade tolerant.

(#8) Spruce, Colorado Blue (*Picea pungens*)

Height: 30'-60' Full sun to shade; sandy to moist soils

Drought resistant once established. Beautiful ornamental and Christmas tree. Excellent for windbreaks, soil stabilization, and wildlife cover. Slow growing.

(#10) Spruce, Norway (*Picea abies*)

Height: 50'-80' Full sun to shade; wide variety of soils

Moderately fast-growing. Graceful, pendulant branches with large cones. Used for windbreaks, wildlife habitat, and as an ornamental.

(#12) Spruce, White (*Picea glauca*)

Height: 50'-80' Partial shade; variety of soils, moist soils

Native to Michigan. Slow growing, long lived species. Retains lower branches making it excellent for wildlife cover, windbreaks and visual screening.

(#14) Tamarack, (Larch) (*Larix laricina*)

Height: 40'-80' Full sun to partial shade; moist to well-drained soils

A deciduous conifer with delicate needles that turn bright golden in the fall prior to falling off.

HARDWOODS

(#14A) Aspen, Quaking (*Populus tremuloides*) **(NEW ITEM)**

Height: 20'-60' Most soils with adequate moisture and sunlight;

Fast growing tree, approximately 24" a year. When the wind blows the leaves tremble and flutter hence the name Quaking. **NRCS Approved.**

(#15) Birch, White (*Betula papyrifera*)

Height: 40'-65' Full sun; well to poorly-drained soils.

Commonly known as paper or canoe birch. Fast-growing, short-lived tree with creamy-white bark. Beautiful yellow autumn foliage. Salt tolerant.

(#16) Hybrid Poplar (*Populus X canadensis robusta*)

Height: 50'-70' Full to partial sun, all types of soil

The Hybrid Poplar is a fast growing shade tree also called a Seedless Cottonwood. Some fast growing trees are short lived, but not the Hybrid Poplar. It will grow 6-8 feet a year. Available as Seedling or Pole

(#17) Hybrid Poplar Pole (*Populus X canadensis robusta*)

(#18) Maple, Red (*Acer rubrum*)

Height: 50'-70' Shade; wide range of soils

Fast-growing tree, also referred to as "soft maple." Wood used for pulp and low grade lumber. Bright red fall foliage.

(#19) Maple, Sugar (*Acer saccharum*)

Height: 60'-100' Shade; moist, fertile to sandy soils.

Also referred to as "hard maple." Used for quality lumber, veneer, and maple syrup production. Golden yellow foliage in autumn. Salt tolerant.

(#20) Oak, White (*Quercus alba*)

Height: Up to 100' Partial shade to full sun; wet or dry soil

White Oak will provide shade and habitat for wildlife. A long-lived tree, some reaching 500 years old. Not as susceptible to oak wilt as the red oak group.

(#21) Oak, Bur (*Quercus macrocarpa*)

Height: Up to 100' Partial shade to full sun; wet or dry soil

Usually wider than tall, the tree can exceed 100 ft. in height and width. The acorns of this species, distinguished by very deep fringed cups, are the largest of all native oaks.

(#21A) Poplar, Balsam (*Populus balsamifera*) **(NEW ITEM)**

Height 60'-100' Sunny; sandy loamy soil

(Replacement for Ash**)**

Balsam poplar is the northernmost North American hardwood. Other names are tacamah, cottonwood or heartleaf balsam. Can tolerate wet sites.

(#22) Redbud, Eastern (*Cercis canadensis*)

Height: 20'-30'; Full sun or light shade. Partial shade preferred in windy, dry areas.

Moist soil; full sun to some shade (often an understory tree). Can grow to 30 ft. Early flowering with purple-pink flowers; yellow foliage in Fall. Heart-shaped leaves.

(#23) Tulip Tree (*Liriodendron tulipifera*)

Rapid growth (to 120 ft.) and brittle branches.

Needs sun and rich, well-drained soil. Water. Yellowish-green to orange flowers resembling tulips in Spring and brilliant golden foliage in Fall. Attracts many pollinators.

(#24) Walnut, Black (*Juglans nigra*)

Height: 60'-90' Full sun; moist, fertile, well drained soils.

The nuts are excellent for wildlife and humans. Does not tolerate very wet or dry soils. Salt tolerant. Excellent timber. Fragrant resin.

(#25) Willow, Black (*Salix nigra*)

Height: Up to 140' Full sun; saturated or poorly drained soil

(Replacement for Ash**)**

Fast growing tree, native tree that can tolerate very wet sites. It is fast growing, but may live for only 40 or 50 years. Wood is brittle and the tree may require regular pruning.

LANDSCAPE AND WILDLIFE SHRUBS

(#26) American Highbush Cranberry (*Viburnum trilobum*)

Height: 3'-13' Full sun; moist to wet soils

Leaves turn a brilliant scarlet in autumn. Fruit persistent through winter making it a great food source for wildlife.

(#27) Black Chokeberry (*Aronia melanocarpa*)

Height: 2'-7' Full to partial shade; dry to moist soils Fruit ripens to glossy black.

Well liked by birds, bear, and deer. If planted in direct sunlight, autumn colors become lighter and fruit production increases.

(#28) Butterfly Bush (*Buddleia davidii*)

Height: 5'-10' Full sun; well drained soils

Fast-growing, easy to maintain. An excellent source of nectar for butterflies, hummingbirds and bees. Cut back in late spring after buds first appear.

(#29) Chokecherry (*Prunus virginiana*)

Height: 10'-20' shrub or tree; Full sun: many soils

Its quick growth, attractive white flowers in the and strong, sweet and almond-like aroma fragrance make it a great yard tree. Mammals and birds enjoy the dark-colored berries.

(#30) Dogwood, Gray (*Cornus racemose*)

Height: 4' - 10' Full sun to partial, moist soil

Its bark is gray and its twigs have white pith, The plant grows upright with a rounded habit, oppositely arranged leaves, and terminally born flowers. The white flowers are small and produce green fruit

(#31) Dogwood, Red-Osier (*Cornus stolonifera*)

Height: 7'-10' Full to partial sun; moist to wet soils.

Fast growing and spreading. Beautiful deep red bark, good food and cover for wildlife such as deer, bear, birds, and small mammals.

(#32) Elderberry (Black) (*Sambucus canadensis*)

Height: 3'-12' Full to partial shade; rich, moist soils

A stout, strong-growing shrub with white flowers (July), followed by purple-black fruits. Safe for human and wildlife consumption.

(#33) Forsythia (*Forsythia sp.*)

Height: 3'- 9' Full sun to partial sun; various soil types

Brilliant yellow early spring flowers cover upright stems before leaves. Great for borders or specimen plant in landscape. Best blooms in full sun. Tolerates varied environmental conditions.

(#34) Hazelnut (*Corylus americana*)

Height: 6'-12' partial to full shade; dry to moist soils

Multiple-stemmed bush. Produces abundant nuts within 3-4 years after planting. Eaten by grouse, turkey, deer, and small mammals.

(#35) Lilac-Late (*Syringa villosa*)

Height: 12'-15' Full sun; wide variety of soils

Multiple-stemmed, non-suckering shrub. Forms thickets for wildlife cover. Drought resistant. Great for windbreaks and as a pollinator species. Flowers 1-2 weeks later than common lilac.

(#36) Mountain Ash (*Sorbus americana*)

Height: 12'-25' Partial shade to shade; wide range of soils

(Not a true ash, not susceptible to Emerald Ash Borer)

Slow-growing with beautiful white flowers. Orange-red fruit persistent in winter and eaten by many songbirds.

(#37) Nanking Cherry (*Prunus tomentosa*)

Height: 6'-8' Full sun

Easy to maintain, bears up to 8 quarts in July. Tangy flavor like that of sour cherries.

(#38) Nannyberry (*Viburnum lentago*)

Height: 13'-23' Partial shade; moist to wet soils.

A moderately fast-growing shrub with beautiful flowers (May/June). Abundant fruit eaten by birds and small mammals.

(#39) Ninebark (*Physocarpus opulifolius*)

Height: 5'-8' Full sun to part sun; medium to dry soil; drought tolerant

1-2" white or pink flower clusters appear from spring through mid-summer. The multicolored, peeling bark provides winter interest.

(#40) Roselow Sgt. Crabapple (*Malus sargentii*)

Height: 8' -12' Full sun; very sandy soils.

Excellent for windbreaks. Showy flowers with persistent fruit. Abundant food and cover used by birds and mammals.

(#41) Rose of Sharon (*Hibiscus syriacus*)

Height: 8'-12' Full sun; well drained, moist soil

Blooms late summer and into fall, don't be alarmed if other plants are leafed out and this shrub is not leafed out.

(#42) Serviceberry (*Amelanchier canadensis*)

Height: 10'-20' Partial shade; moist, fertile to dry soils.

This tree is one of the first to flower. Fruit is widely used by wildlife and is also edible by humans. Grows as tall as 20 ft. on the best soils.

(#43) Winterberry Holly (*Ilex verticillata*) aka. Michigan Holly

Height 5'-10' Full sun: moist soils

Densely branched shrub with waxy foliage and bright red berries makes a desirable native landscape plant, Deciduous.

FYI:

Sizes of all trees and shrubs may vary from the listed size due to growing conditions at the various nurseries.

FRUIT TREES \$23 EACH OR 5 FOR \$108 excluding #50 & #53

APPLE TREES

(#44) Aztec Fuji Apple

With the juicy, sweet crunch of a Fuji, Aztecs have some of the reddest skin seen on apples, coloring to a full red. Ripens in mid-late October. Zones 4-8

(#45) Cortland Apple

This productive tree bears gorgeous ruby red apples with a snowy center that won't brown in salads. Also perfect for pies and cider. Cold-hardy. Ripens in mid -Sept. Zones 4-6

(#46) Gale Gala

Sweet eating apple; also good for applesauce, etc. Skins red with deep red striping. Partially self-pollinating, but better production if paired with Honeycrisp, Fuji, or white-blossomed crabapple. Zones 4-8

(#47) Gibson Golden Delicious Apple

This vigorous, productive riety russets less than other yellow apples. An all purpose apple, but especially good for baking and sauce. The sweet and juicy fruit ripens in late September. Zones 5-8

(#48) Honeycrisp Apple

The crunch, texture and long storage life of Honeycrisps make them a good choice for a home orchard. Winter-hardy trees are reliable annual producers. Ripens in September. Zones 4-8

(#49) Red McIntosh Apple

This is the Summerland Red McIntosh. The fruit colors early with a deep red hue. A hardy and productive tree, it is sometimes used as a hardy understock for other apple varieties. Zones 4-8

(#50) Wolf River Apple \$30.00ea.

***** NOT PART OF QUANTITY DISCOUNT *****

Tree is strong and disease-resistant to apple scab, fire blight, and powdery mildew. Large fruit is perfect for cooking and sauces. Cold hardy, ripens late September. Zones 3-8

CHERRY TREES

(#51) Blackgold Sweet Cherry

A self-pollinating dark sweet cherry that ripens in July. Used fresh or for canning and pies. Blackgold is late blooming, tolerates some frost and is a suitable pollinator for late-blooming varieties. Zones 5-8

(#52) Jubileum Cherry

A sweeter tart cherry, Jubileum is used for both processing and fresh market. It is the earliest tart variety, maturing five days before Danube® and a full week ahead of Montmorency. The fruit is dark mahogany, juicy, and can be left to hang on the tree to develop additional sugar. The tree is compact and spreading. Zones 4-9

Average fruit tree size is an average of 5' to 6'

Cliff Miller
989-362-3003

CRABAPPLE

(#53) Indian Summer Crabapple \$30.00ea.

***** NOT PART OF QUANTITY DISCOUNT *****

Grows to 15-20 ft. Deep red buds open into rose-colored flowers in Spring; foliage turns from reddish-purple to medium green to orange-yellow through the seasons; red fruit into winter (food for birds). Disease resistant. Zones 4-8

(#54) Manchurian Crabapple

Manchurian Crab is a beautiful white spring flowering crab and makes a nice addition to the landscape. Dense, spreading habit. Its fruit hangs on well after fall. Long bloom season makes it a great pollinator. Zones 3-8

PEACH TREES

(#55) Red Haven Peach

Trees are heavy-bearing and easy to grow and maintain with spreading branches. They bloom late to avoid frosts and are resistant to leaf spot. Zones 5-8

(#56) Reliance Peach

Bright yellow flesh is bursting with flavor. Skin is red splashed over yellow. Medium to large freestone fruit is good for canning, freezing and fresh eating. Self-pollinating. Ripens in August. Zones 4-8

PEAR TREES

(#57) Bartlett Pear

Good for snacking, salads, preserves, chutneys, canning. crunchy, tart, and slightly gritty flesh / when fully ripe: juicy, smooth, buttery, sweet tasting. Self-pollinating but better when there is a different pear variety nearby. Zones 5-7

(#58) Kalle Pear (Red Klapp)

A medium to large fruit that is round in shape with a slender neck. It ripens 10 days ahead of Bartlett. The fruit is flavorful and has a bright red skin. Zones 5-7

PLUM TREES

(#59) Early Italian Plum

An excellent commercial variety, this prune plum ripens 10 days to two weeks ahead of regular Italian. It produces large, oval fruit. It is very similar to Italian in shape and color. Zones 5-8

(#60) Santa Rosa Plum

Fruit is sweet and juicy. Red skin with yellow flesh. Excellent quality fresh from the tree or in jams & jellies. Ripens in mid season. Zones 5-9

#50 WOLF RIVER
#53 INDIAN SUMMER
ARE NOT AVAILABLE FOR QUANTITY DISCOUNT \$30.00 EACH
IF THE WOLF RIVER IS NOT AVAILABLE IT WILL BE SUBSTITUTED WITH A
HONEYCRISP

*****THANK YOU TO OUR SPONSORS*****

SMALL FRUITS

BLUEBERRIES

(#61) Northland Firm berries rich in flavor. Grows to about 6 ft. high. A heavy spreader. Very productive, super-hardy. Bears fruit even after 40° below zero! Ripens early to mid August. Leaves turn deep crimson in fall. Blueberries make a fine hedge. Plants usually start to bear the third year and last 25– 60+ years. Zones 4-7.

RED RASPBERRIES

(#62) Latham The fruit is red, rounded, about two centimeters long and broad, maturing from July through September. High vigor, reliable yields and extreme hardiness make this a popular raspberry in the Midwest. Zones 2-8.

STRAWBERRIES

(#63) Jewel Large, bright red, glossy berries with good internal color and mouth-watering flavor. Plants produce lots of berries. Vigorous, winter hardy, and widely adapted. Ripens at midseason. Self-pollinating. Zones 4-8. Full sun.

GRAPES

(#64) Concord Purple with seeds; very healthy with the skins. Full sun; protect from the wind. If soil is poorly drained, amend the soil. Needs trellising (google or check MSUE). For pollination: needs a few plants of the same variety. Zones 5-8.

(#65) Himrod White seedless. Highly productive, crispy, sweet flavor, good for snacking and raisins. Generally, disease resistant. Needs arbor, fence, etc. For pollination: needs a few plants of the same variety. Zones 5-8.

TREE CARE PRODUCTS

- (#66) Tree Tubes:** Corrugated tubes to wrap around your trees to protect from animal damage. Tubes are 4ft tall and expandable.
1-5 Tubes \$4.00 each 6-10Tubes \$3.75 each 11-50Tubes \$3.50 each
- (#67) Tree Weed Mats:** Plastic mats 2' round to be placed around your trees or plants for weed control.....\$4.00 ea.
- (#68) Marking Tape:** Bright, colorful tape to mark your new plants, protect from the mower, or mark type of plant...\$4.00 roll
- (#69) Marking Flags:** Mark your planting rows with these bright, wired flags.....Bundle of 100 for..\$15
- (#70) Bamboo Support:** 4ft support pole.....\$1.00ea.

Plantskydd Repellent Products

Organic repellent, effective against deer, rabbits, voles, elk, moose, chipmunks, squirrels, nutria, opossum and beaver. Rain resistant, no need to re-apply after every rainfall. Safe for use in vegetable gardens and fruit trees.

- (#PS-1L) 1 Quart Liquid Spray..... \$22** **(#PSP-R1) 1lb Powder Concentrate.....\$30**
(#PS-VRD-3) 3.5lb Granular Shaker Jug.....\$30 **(#PS-G1) 1lb Granular Shaker Can.....\$13**

Iosco Conservation District reserves the right to cancel orders and refund payments; all orders are subject to availability at the time of sale; substitutions may be made.. The Iosco Conservation District is not responsible for orders not picked up on scheduled distribution dates.

It is unlawful to resell plant material purchased from the Iosco Conservation District with the roots attached, per PA 18,10,1931 as amended. All Iosco Conservation District programs are offered on a nondiscriminatory basis without regard to race, color, national origin, religion, sex, age, marital status or handicap.

Don't Forget

Pick up tree tubes to protect your investment.

Do you need insect and critter repellent? We have it!!

Let us know if there is something we need to carry for next year.

Mark your calendars for pickup at Tawas Inn on April 23—25.

Hunter Access Program Available in Iosco County

Get paid for your hunting land!

Iosco County landowners can receive payments for allowing hunters to use their property. Hunter Access Program (HAP) is a voluntary land leasing program. The DNR leases land from private landowners to provide additional hunting areas for hunters. Private landowners determine if all hunters, or youth and apprentice hunters only, may hunt on their property. They also determine if hunters may harvest deer only, small game only, all legal species, or a combination of any of these options. Property owners specify the maximum number of hunters allowed on the land at any one time. Enrolled lands can be found throughout lower Michigan and a portion of the eastern Upper Peninsula.

Find more HAP information at www.michigan.gov/hap or at the ICD website: www.ioscoconservation.org.

FOREST PEST ALERT—OAK WILT

DO NOT prune oak trees during the growing season, between April 15 and July 15. DO NOT move firewood: oak wilt is spread by the movement of infected wood and by several other means.

Call the ICD office if you suspect you see oak wilt on your property.
